solutions for real composers

Polydentia has been developing and producing dental products in southern Switzerland for more than 40 years.

We are a family business where the new generation has managed to maintain the strong authentic Swiss entrepreneurial values, bringing great dynamism to the development of new products, constantly listening to the needs of the market and creating strong ties and collaborations with opinion leaders worldwide. Our mission is to continue producing the best Swiss quality solutions that enable dentists to simplify their daily practice and improve patient care.

Passion, innovation and quality are the values that guide us in our daily work looking for practical and attractive solutions to benefit the needs of modern conservative and aesthetic dentistry of our times.

Thank you for your trust,

Claudia Schaffner Paffi

restorative

Polydentia Restorative

Polydentia offers great solutions developed to attain better results in aesthetics and conservative dentistry, both for anterior and posterior restorations.

Our restorative assortment entails an anterior matrix system and a collection of adult and paediatric posterior matrix systems that simplify your work flow and assist you achieve predictable direct restorations.

Our kits of sectional matrix systems include separator rings offering different separation forces, along with interchangeable extremities, high-contrast sectional matrices, and anatomical wedges. These instruments make our restorative products suitable for a wide range of clinical cases of Class II cavity restorations and application techniques, even in case of low crown height teeth and wide cavity preparations

Should a more traditional approach be preferred, a tensioning system and a comprehensive selection of matrix bands are also available.

All our restorative products are Swiss-made and comply with the most rigorous national and international regulations.

Unica anterior Introkit

powered by **STY-E ITALIANO**

Unica anterior is the simple and ideal matrix for anterior restorations such as class III, IV, V, direct stratification composite veneers, and shape modifications.

Thanks to its contoured shape, Unica adapts correctly to the different morphologies of anterior teeth and makes it possible to restore proximal and cervical margins at once, even in presence of rubber-dam or gingival retraction cords, thus reducing chair time significantly. The placement wings allow fast and efficient matrix positioning.

Furthermore, Unica anterior once positioned allows to easily visualise the final shape of the restoration, even before starting the procedure.

- **Ideal matrix for anterior restorations**
- **Easy management of the whole emergence profile**
- **Wings for easy placement**
- **Contoured, anatomical shape**

myTines Small

myTines Medium

myTines Large

myClip 2.0

All-in-one sectional matrix ring with short handles that act as forceps. There is no need for special placing tools as myClip 2.0 can be easily positioned with your fingers. myClip 2.0 features an optimal separation force that allows to create excellent contact points in the restoration of Class II cavities, making it suitable for all clinical conditions. Thanks to the ring's high-tech plastic extremities (myTines Small, Medium and Large), myClip 2.0 adapts to both teeth of different crown heights and wide cavity preparations. In case of dissimilar tooth morphologies, the autoclavable myTines can be used in combination to enhance the matrix adaptation to the proximal walls and consequently reduce the need for finishing steps. Doctors using myClip 2.0 benefit from the long lifetime of the premium-quality stainless steel ring as the extremities can be replaced should they present signs of wear and tear.

- All-in-one sectional matrix ring. No need for ring forceps
- Suitable for teeth of different crown heights and wide cavity preparations
- Optimal separation force
- Quick, easy, one-hand ring positioning
- Replaceable, interchangeable and autoclavable plastic extremities

myTines Large

myQuickmat Forte kit

Complete sectional matrix system kit developed to offer strong tooth separation in order to create excellent contact points in the restoration of Class II cavities. This kit features myRing Forte, a sectional matrix ring that adapts to both teeth of different crown heights and wide cavity preparations, thanks to its extremities (myTines Small, Medium and Large). In case of dissimilar tooth morphologies, the autoclavable and replaceable myTines can be used interchangeably to enhance matrix adaptation. The kit comprises a selection of myWedge, high-quality, anatomical interdental plastic wedges. Their hollow V-shape allows them to compress and adapt to the interproximal anatomy of teeth, preventing damage to the papilla. LumiContrast sectional matrices complete the kit's matrix assortment. These dark-blue matrices significantly increase contrast and reduce glare effect, especially while using loupes or microscopes.

- Strong separation force for tight contacts
- Suitable for teeth of different crown heights and wide cavity preparations
- Replaceable, interchangeable and autoclavable plastic extremities
- Exceptional matrix adaptation and retention
- Complete kit including myForceps

New extremities for myClip 2.0 & myRing Forte
pages 10 - 11

myTines Small & Medium

myTines Small and myTines Medium are versatile extremities for myRing Forte & myClip 2.0, developed for a precise adaptation of Polydentia's sectional matrices to a wide range of clinical situations and teeth of different crown heights. In case of dissimilar tooth morphologies, the ability to combine myTines Small with myTines Medium on the same Polydentia's sectional ring, provide an enhanced matrix adaptation to the teeth and a firm grip, thus reducing composite flashes and optimising stability. The anatomical shape of myTines Small & Medium enable to achieve tight contact points.

- **Replaceable, interchangeable and autoclavable plastic extremities**
- **myTines Small: improved adaptation on teeth of low crown height**
- **Increased stability of the rings**
- **V-shaped for better positioning over the wedge**

New extremities for myClip 2.0 & myRing Forte
pages 10 - 11

myTines Large

myTines Large are the new extremities especially developed to be fitted on myClip 2.0 and myRing Forte to the stability of the sectional matrix rings on wide cavity preparations even in case of missing cusps. The asymmetry of the wings allows a perfect adaptation on distal and mesial cavities simply by inverting the position of the extremities. Also, the possibility of combining different myTines (Small, Medium and Large) ensures an excellent matrix adaptation and a firm grip, thus reducing composite flashes and overhangs.

- **Increases ring stability on wide cavity preparations even with missing cusps**
- **V-shaped for better positioning over the wedge**
- **Replaceable, interchangeable and autoclavable plastic extremities**
- **Asymmetric extremities' wings improve adaptation**
- **Extremities can be rotated to provide further flexibility**

myQuickmat Classico kit

Complete sectional matrix system developed to offer gentle tooth separation in order to create excellent contact points in the restoration of class II cavities. This kit features Polydentia's myRing Classico, a classic sectional matrix ring made of nickel titanium. It is reinforced to provide an optimal and gentle separation force in combination with the included Interdental Maple Wood Wedges. For the restoration of very extensive cavities, the kit also includes the extremities Delta Tubes. These anatomically shaped silicone tubes ensure optimal matrix retention and adaptation to the tooth's anatomy. LumiContrast sectional matrices complete the kit's assortment. These dark-blue matrices significantly increase contrast and reduce glare effect, especially while using loupes or microscopes.

- **Optimal, gentle separation force for tight contacts**
- **myRing Classico and Delta Tubes entirely autoclavable**
- **Excellent matrix adaptation and retention**
- **Complete assortment of matrices and wedges**

"No matrix deformation even in case of broad cavities"

Diamond²⁴
powered by **STYLE ITALIANO**

Diamond²⁴ are anatomically shaped silicone tubes designed to be used with Polydentia's sectional matrix ring "myRing Classico". Diamond²⁴ can be oriented in 24 different combinations of shape and length ensuring an optimal matrix retention and adaption to the tooth even in case of difficult clinical situations.

- **Flexible to allow to carefully bend the matrix to shape without collapsing into the cavity**
- **Embrace the matrix: optimal contact points**
- **24 combinations to enhance the adaptability to the clinical situation**
- **Autoclavable and replaceable**
- **Customizable: cut and shape according to necessity**

myCustom Rings kit

powered by  STYLE ITALIANO

myCustom Rings kit has been developed in partnership with Style Italiano, a study group of clinicians and researchers specialized in aesthetic and restorative dentistry. This kit is conceived for the application of an innovative technique developed by Style Italiano.

The myCustom Rings technique allows to easily recreate the pre-existing interproximal anatomy. The ring tines are custom-shaped by taking an impression of the healthy and intact proximal walls using the included light curable myCustom Resin. This enables to achieve strong contact points and precise proximal contour during restoration. The myCustom Rings kit also features a complete selection of assorted, thin Sectional Matrix Bands powered by Style Italiano (Quickmat, LumiContrast, and Transparent), as well as Interdental Maple Wood Wedges, and the newly re-designed Delta Tubes, also powered by Style Italiano.

- Proven technique developed by Style Italiano
- Customizable extremities
- Complete range of sectional matrices included
- Clinical cases, support and updates are available at: www.styleitaliano.org

my junior kit

myJunior kit is the first sectional matrix system for paediatric dentistry, especially developed to suit smaller deciduous and young permanent teeth. The kit offers child-friendly solutions that help saving valuable chair-time and reduce the distress of children, allowing them to quickly return to their favourite activities. Two junior sectional matrix rings are included in the kit, myClip Junior and myRing Junior. These minimally invasive, safe to use, bright-coloured paediatric rings combine stability with the right separation force, that enables dentists to achieve ideal contact surfaces. In addition, the extra grip provided by the flexible extremities myTines Junior and the rounded silicone tubes ensure a better adaptation of the sectional matrices, hence preventing annoying composite flashes and overhangs.

- Child-friendly, safe to use, bright-coloured solutions
- User-friendly intuitive system
- Small sized restorative solutions that suits deciduous teeth
- Optimal separation force for tight contacts

The opinion of professionals:

myClip 2.0

Dr. David Gerdolle - Switzerland

“myClip 2.0 is very easy to handle. Its tines have a special geometry and rigidity allowing very efficient matrix positioning on the palatine and buccal walls. This saves time for the finishing steps and ensures a good proximal morphology.”

myQuickmat Forte kit

Dr. Radoslav Asparuhov - Bulgaria

“The use of myQuickmat Forte Kit is extremely easy and the results are predictable – perfect seal of the margins, while ensuring an adequate outline of the restoration and tight contact points. The separating force of myRing Forte is more than enough to compensate the thickness of the already thinnest matrices available.”

myQuickmat Classico kit

Dr. Giuseppe Chiodera - Italy

“An accurate reproduction of the contact point and proximal walls is a must in Class II restorations. The versatility provided by combining myRing Classico with Diamond24 offers additional flexibility in adapting the sectional matrix system to the clinical situation.”

myCustom Rings kit *powered by Style Italiano*

Dr. Anna Salat - Italy

“In almost any case where the proximal embrasures are healthy and intact, and there is the risk of losing them, myCustom Rings is the best technique to overcome this common difficulty. Easy to use, as well as easy to produce, this is a strategic technique for the everyday adhesive modern dentistry.”

myJunior Kit

Dr. Marina Papachroni - Greece

“I regard myJunior kit as an optimal solution for paediatric treatments. The system offers the ideal tools for the treatment of primary and young permanent teeth, which allowed me to achieve an excellent restoration with less efforts and with considerable chair-time savings”.

Unica anterior Introkit *powered by Style Italiano*

Dr. Jordi Manauta, DDS., Head of StyleItaliano Idea Factory - Italy

“Unica anterior is the solution to anterior restorations, whether it be class III, IV, V, shape modifications, and direct stratification composite veneers. One effective matrix for everyday anterior aesthetic and functional results”.

Maximat Plus

Maximat Plus is a universal system for placing and tightening steel or transparent plastic matrices in the posterior region. Thanks to Maximat Plus, conventional retainers are no longer needed. The procedure is very simple and quick: the matrix, once positioned on the tooth, can be tightened with just one hand. After fixing the matrix in place, the tightening instrument shall be removed. Furthermore, during treatment, only the spool remains in the mouth, ensuring better visibility of the area during filling and light curing. Maximat Plus eliminates the leverage effect and consequent distortion of the proximal surfaces that come with conventional retainers, thus allowing the restoration of precise and anatomically correct contact points. Several fillings can be placed simultaneously in the same quadrant.

- Only the matrix spool remains in the mouth
- Application with one hand only
- Ideal view of operatory field
- Autoclavable spools

myWedge

myWedge is an interproximal wedge made of hi-tech plastic material. Its innovative hollow v-shape allows it to compress and adapt to the interproximal anatomy of teeth. It prevents damage to the papilla while guiding and forming the matrix band to the anatomy of the cervical area of the tooth. myWedge's unique round-head geometry has been designed for easy handling, placement, and removal of the wedge with any standard tweezers or forceps.

- **Innovative hollow v-shape**
- **Gripped head to prevent sliding**
- **Flashy colors for easy identification**

The Wedge

Made of hi-tech plastic material, The Wedge combines softness and elasticity, providing an optimal adaptation of the matrix along the cervical margin, even in concave zones and in widening interdental spaces.

The transparent reflecting surface of "The Wedge" permits optimum reflection of light and ensures higher polymerization rates of light cured filling materials.

Clinical Tips: Insertion angle of 45° from coronal: "The Wedge" automatically follows the anatomy of the interdental space.

A - The parallel wedge shape ensures maximum wedging up to the exit point of the wedge.
B - The special polymer allows perfect adaptation of the matrices along the entire cervical section of the cavity, also to concave shapes.

splinting

∞

Splinting

Splinting is a biocompatible alternative to splints with metal retainers. Its first version, Fiber-Splint, was jointly developed with a dentist in 1989. All further versions were identically designed and developed with the recommendations resulting from our partner's experience. Our fibers are particularly suitable for all kind of dental splints, as for example stabilization of teeth which are mobile due to trauma, or loose teeth resulting from periodontal disease.

They are indicated also for temporary repositioning of extracted front teeth and/or for teeth reconstructed in composite. They are very versatile and allow a fast and simple realization of highly aesthetic results. Fibers are also very comfortable and less invasive for the patient compared to metal retainers. In order to grant an excellent result, we have developed Clip&Splint fixation clips. Many Splinting products have been awarded by the renowned US magazine "The Dental Advisor".

F-Splint-Aid & Slim

F-Splint-Aid & Slim are fiberglass ribbons pre-impregnated with bonding (Fiber-Bond). F-Splint-Aid (4 mm) and F-Splint-Aid Slim (2 mm), both grant the same strength. The Slim version is particularly conceived for the treatment of surfaces with reduced dimensions. The practical black bottles protect the fiberglass from light and allow a precise dosage of the splint length (cut according to the clinical need), avoiding material waste. Each bottle contains a fiberglass ribbon useful for 4-7 applications, depending on the treatment to be performed. Every bottle is delivered with Clip&Splint, which are unique autoclavable interdental plastic clips. The product has been awarded several times by the renowned US magazine "The Dental Advisor".

- **Unique bottle dispensing system**
- **Ready to use solution**
- **With innovative Clip&Splint fixation clips**
- **Highly aesthetic results**

Fiber-Splint ML Mini Starter Kit

This kit includes a transparent Fiber-Plast silicone key which allows to reproduce the original position of the teeth with extreme precision. The transparency of the silicone allows polymerization of the fiberglass directly through the impression. The advantages of Mini Starter Kit are particularly noticeable in the case of splints/fixation after extraction.

- Ideal after tooth extractions
- For extremely thin and strong splints
- Excellent aesthetic results

Content	Width	Length	REF
Fiber-Splint ML Mini Starter Kit			5976

Fiberglass ribbons of different size and thickness. The application is very easy: the Fiber-Splint strip is saturated with bonding agent (Fiber-Bond), positioned on the etched and bonded palatal/lingual surfaces, then fixed in the interdental area with "Clip&Splint" application clips and lightcured. Fiber-splints are very versatile and realize highly aesthetic results. The practical dispenser allows to avoid waste of material.

Fiber-Splint

- Extremely thin, one-layered
- For optimum result the application should be repeated for at least five strips

Content	Width	Length	REF

Temporary solution while waiting for an implant | By courtesy of Dr. Giacomo Derchi - Italy

The opinion of professionals:

F-Splint-Aid & Slim Introkit

Dr. Med. Dent. Hagner - Germany

"I regard the special benefit of the F-Splint-Aid Slim to be the stable, woven structure of the splint material and its practical availability in the light-protected storage bottle. The Clip&Splint plastic clips provided for fixing the splint material to the teeth represent a further advantage."

Fiber-Splint

Dr. J. Pouet-Piccerelle - Switzerland

"The use of Fiber-Splint benefits from the following advantages: rapidity, treatment without pain and aesthetics. This product is easy to manipulate and is essential in any dental practice in case of emergency."

Fiber-Splint

Dr. M. Chauhan - USA/India

"With Fiber-Splint the dentist can quickly stabilize mobile anterior teeth, with long-term reliability. It grants high aesthetic results and enhances patient's self confidence."

Fiber-Splint ML

Prof. Dr. A. Bass - Argentina

"Results after the use of Fiber-Splint Multi-Layer have been very satisfying and stable over time."

protective
face- and
eyeshields

Vista-Tec Faceshield

Vista-Tec Faceshields provide full facial protection maintaining an excellent view. The faceshields do not restrain the communication with patients. The protective shields are made of first quality transparent, environment-friendly plastic, are scratch resistant and do not yellow when subjected to daylight. They are reusable when treated with care and can be cleaned easily with a mild soap. The frame is very comfortable to wear and elegantly designed. The black version is very resistant and can be put into the autoclave and thermodisinfectant. All frames have built in clips for Vista-Tec face- and eyeshields.

- Comfortable to wear, ultra light (16g)
- Integrated clip for shield fixing
- Reusable shields
- Black version sterilizable with all current methods (134 °C / 273 °F)

A gentle pressure on the membrane releases the required liquid drop by drop

Hy-Drop

Hy-Drops are practical hygienic liquid dispensers compatible with: alcohol, chlorhexidine, hydrogen peroxide, sodium hypochlorite and distilled water. Each Hy-Drop holds 4 ml and delivers the liquid drop by drop whenever the membrane is gently pressed, providing an efficient dosage control by a singlehanded operation. In addition, several liquid dispensers can be put together to save space. Hy-Drop is available in five different colors to prevent mix-ups over the contents of each dispenser.

- Perfect and efficient dosage of liquids
- Single-handed operation
- Includes 5 autoclavable membranes
- Autoclavable

Content

1 Hy-Drop + 5 membranes

Blue PolyShapes

Blue PolyShapes are composite placement and modelling instruments made of hi-tech plastic material. The kit features two double ended instruments. The different tips are designed for layering and contouring a direct posterior restoration to its final form. Additionally, they are indicated to create perfect contact points, holding the matrix band firmly against the adjacent tooth.

- Blue color for chromatic contrast
- Lightweight and ergonomic to avoid hand fatigue
- Composite does not stick to Blue PolyShapes

Content

Stop Card & Endo-Stops

Stop-Card is a simple but effective dispenser for Endo-Stops, dispensing one Endo-Stop at a time and holding it in position while the endo-instrument is easily inserted into it. The working length of the instrument can then be set with the integrated measuring ruler. Endo-Stops are made of silicone and are essential marking tools when working with endodontic files. They have a diameter of 3.5mm and a thickness of 1mm.

- Practical dispenser
- Integrated measuring ruler
- Eight different Endo-Stop colors
